Retired pages that now 301-redirect into the pages above: `/pricing` → `/express`,
`/work` → `/testimonials`, `/process` → `/about#process`, `/faq` → `/express#faq`,
`/status` → `/express#builders`.

Home — `/`

Purpose: the front door. Establishes what WSS DevLabs is (a productized + bespoke software studio), proves scale with headline stats, and routes visitors into the three main paths: Express, Marketplace, or full custom services.

Sections, top to bottom:

1. **Hero** — “Empowering Businesses Through Custom Tech Solutions,” trust badges (100% Malaysian Built, 10+ Years), and a stats bar (2000+ Hours Shipped, 10+ Years Engineering Experience, 6+ Buy-Once Systems, RM 5M+ Client Value Generated).
 2. **Our Services** — flip-card grid of all individual services (auto-flips 3 random cards at a time to preview each service’s back-face description).
 3. **Our Strategic Partners & Clients** — auto-scrolling horizontal marquee (placeholder logo slots, ready for real partner/client logos).
 4. **Testimonials** — client review carousel.
 5. **Elevate CTA** — conversion banner.
 6. **Marketplace & Express banner** — cross-sell into the two productized offerings.
-

WSS Express — `/express`

Purpose: the fixed-price, fast-turnaround web package offering. This is the “no custom quote, no sales calls” product line, aimed at SMEs who want a website shipped in days, not weeks.

Sections:

1. **Hero** — “Fast, High-Speed Websites Without the Agency Fluff,” trust bar (3–7 Days average ship time, RM 0 hidden fees, 90+ Lighthouse score guaranteed, 100% direct with senior engineers).

2. **Packages** (`#packages`) — 3 fixed-price tiers:
 - **WSS Express Landing** — RM 180/year, 3–5 days, for micro-SMEs and solo traders.
 - **WSS Express Starter** — RM 1,500, growth-stage sites.
 - **WSS Express Business** — RM 4,500, full commerce-ready platform.
 3. **Answer Engine Optimization (AI-SEO)** — explains structured JSON-LD/schema markup shipped with every build so AI assistants (ChatGPT, Perplexity, Gemini) can cite the business directly.
 4. **Recent Production Deployments** (`#deployments`) — live shipment log with Mobile Lighthouse scores.
 5. **SME Grant & Project Calculator** — interactive calculator estimating project cost and MSME Digital Grant MADANI matching.
 6. **FAQ** (`#faq`) — full searchable, tabbed FAQ (7 categories: General, Services, Marketplace & Express, AI & IoT, Process, Pricing & Plans, Technical). Migrated here from the old standalone `/faq` page.
-

Marketplace — `/marketplace`

Purpose: buy-once, own-forever business systems with full source code — the anti-SaaS-subscription pitch.

Sections:

1. **Hero** — “The WSS Marketplace.”
2. **Systems grid** — all 6 systems as cards (category tag, tagline, summary, “Under the Hood” highlight, tech stack tags, Technical Specs + Buy Once CTAs).
3. **Buy-Once Philosophy** — dark banner explaining why full source ownership beats subscription lock-in (Ed25519 offline licensing, zero commission, PDPA data privacy).

The 6 systems (each has its own detail page at `/marketplace/{slug}`):

System	Category	Tagline
WSS EventSpace	Venues & Hospitality	Real-time availability calendar & hall booking engine
WSS MedCare Clinic	Health & Services	Appointments & live patient queue
WSS TicketFlow	Venues & Hospitality	QR ticketing & gate scanner
WSS BuildRight CRM	Corporate Operations	—
WSS Directory	Real Estate & CRM	—
WSS StaffPortal	Corporate Operations	Internal RBAC operations hub

Each detail page includes: full feature list, technical architecture, security/licensing terms, tech stack, pricing, included deliverables, and a system-specific FAQ.

Services catalog — </services>

Purpose: the full menu of everything WSS DevLabs offers, organized into 5 pillars, for visitors who need something beyond the productized Express/Marketplace lines.

Sections:

1. **Services grid** — every individual service as a flip card (front: photo + title; back: short description). Auto-flips 3 random cards at a time.
2. **Our Latest Projects** — 3 placeholder case-study cards (grayscale image, turns to color on hover; “Case Study Coming Soon” badge — ready to swap in real project photos/results).
3. **Why you should try us** (Differentiator) — reasons to choose WSS DevLabs.
4. **CTA band** — “Ready to start your project?”

The 5 service pillars, each with its own category page at </services/{slug}>:

1. **Web, System & Mobile App Development** ([web-software-app-development](#)) — custom websites, mobile apps, internal systems. Includes the SME/Corporate website pricing comparison tables (SME: RM 1,799–RM 3,499; Corporate: RM 4,299–RM 7,399, both +8% SST) and a Mobile & Web System deep-dive section. Services: Web Development, Mobile App Development, Custom Systems (CMS/ERP), UI/UX & System Redesign.
 2. **Digital Design & Media Marketing** ([digital-design-media-marketing](#)) — UI/UX design, branding, product photography, media creation, digital marketing. Includes a Google Ads/SEO pricing breakdown (Google Ads: RM 500–RM 2,000/month; SEO retainer: RM 1,200–RM 1,900/month).
 3. **Digital Consulting & Solutions** ([digital-consulting-solutions](#)) — business growth strategy, grant/government project support, business startup packages, maintenance & support.
 4. **Artificial Intelligence & Automation** ([artificial-intelligence-automation](#)) — AI development, custom ML models, AI chatbots, AI analytics, workflow automation, computer vision.
 5. **IoT Solutions & Infrastructure** ([iot-solutions-infrastructure](#)) — connected devices, sensor networks, edge computing. Includes a 3-part hardware infrastructure breakdown (structural components, operational roles, industry applications) covering agritech, industrial IoT, smart cities, smart homes, and healthcare wearables.
-

About — [/about](#)

Purpose: trust and credibility — who’s actually building the client’s project, and how the engagement works end to end. This page absorbed the old standalone [/process](#) page as new sections.

Sections:

1. **Vision / Mission** — with a founder portrait frame (Razali, Founder of WSS DevLabs).
2. **About Us story** — “One team, whatever the digital need” — the studio’s origin story and 3 core capability rows (Websites/Apps/Systems, Marketing/Branding/Media, Grants & Startup Launches).

3. **Why our clients believe we're different** — 4-feature grid (One Team Every Need, Built Around Your Brief, Direct with the Builder, Delivered Properly).
 4. **How we get you to launch** (`#process`) — dark 8-step scroll timeline: discovery call → proposal & quote → contract & deposit → kickoff & requirements → design sign-off → development sprints → QA & client review → sign-off, launch & handover.
 5. **The Solution Development Process** — 7-phase deep-dive for IoT/AI-style projects (requirement analysis, solution design, PoC, development & integration, testing & validation, deployment, maintenance & support).
 6. **Key Features of Our Solutions** — scalability, security, real-time analytics, customizability, integration capabilities.
-

Testimonials — `/testimonials`

Purpose: social proof — client reviews, plus a way for clients to submit their own.

Sections:

1. **Reviews carousel** — “Reviews from our clients,” horizontal-scrolling review cards (author, role, company, star rating, quote).
 2. **Leave a review** — modal form (name, company, rating, review text) that submits via Web3Forms.
 3. CTAs to start a project or leave a review.
-

Insights (blog) — `/insights`

Purpose: SEO/AI-SEO content marketing — practical, sourced articles on web development, SEO, and running an SME in Malaysia.

Format: featured post + latest posts list + “More from WSS DevLabs” carousel. Clicking any post opens a centered modal with the full article and a “visit the source” link (each post is written after studying a real external source, credited at the bottom).

Current posts (7):

1. Why Page Speed Still Matters for Google Rankings

2. The MSME Digital Grant MADANI, Explained Simply
 3. Why Mobile-First Design Isn't Optional Anymore
 4. Do You Need E-Invoicing Yet? What Malaysian Small Businesses Should Know
 5. Why Your Google Business Profile Matters More Than You Think
 6. What Should a Website Actually Cost in Malaysia?
 7. What Is a CMS, and Why Should a Small Business Care?
-

Contact — </contact>

Purpose: the direct conversion page for anyone ready to reach out.

Sections:

1. **Heading + contact info** — phone, location, email (info@wssdevlabs.com), social links.
 2. **Contact form** — name, email, preferred consultation date/time, message; submits via mailto.
-

Legal pages — </privacy>, </terms>, </cookies>

Standard PDPA-compliant Privacy Policy, Terms of Service, and Cookie Policy. Plain-text legal copy, no marketing sections. Each ends with a contact line pointing to info@wssdevlabs.com.

Global elements (present on every page)

- **Header** — floating pill nav with logo, 6 icon links (Home, Services, About, Express, Marketplace, Insights & FAQ), and a “Consult with Us” button linking to </contact>.
- **Footer** — 4 columns (Services, Company, Let's Connect, Location), social links, legal links, copyright.
- **Floating chat button** (bottom-right) — currently a WhatsApp deep-link; a periodic “Ask me anything” bubble nudges visitors every 7 seconds. (*Reserved slot for the upcoming Botpress chatbot — see note below.*)

- **Services popup** — on every page except Home and Contact, a dismissible top-left card surfaces the 5 service pillars (“Services you may like”).
 - **Site intro** — on first visit each session, a centered logo on a white background animates into the nav bar logo before revealing the page.
 - **Cookie consent banner.**
-

Note: upcoming chatbot (Botpress)

The bottom-right floating icon is currently the WhatsApp button. The founder plans to build a company chatbot with Botpress and place it in this same bottom-right position — likely replacing or sitting alongside the current WhatsApp CTA. No chatbot integration exists yet as of this document.
